

Child Safe Blinds

There has been a change to the European Standard in 1914 for the blinds industry to make all blinds safe. As a result, all blinds supplied by us come with the latest safety features for the blinds industry especially for children and venerable people. All our blinds come with warning labels. In addition, all blinds are supplied with a cord /chain tidy.

Generic warning hang tag

WARNING

Young children can strangle in the loop of pull cords, chain and bead cords, and cords that run through window coverings. They can also wrap cords around their necks. To avoid strangulation and entanglement, keep cords out of the reach of young children. Also,

1. install safety devices that remove the cord loop or reduce access to cords, and
2. move cots and furniture away from window covering cords.

Operational hang tag (for a tension device)

WARNING

The tension device reduces the hazards of strangulation or entanglement by limiting access to the cord or bead chain.

Anchor the device with the cord or bead chain to the wall or floor, so young children cannot pull the cord or bead chain around their necks. Always keep cords out of the reach of young children.

Pleated Blinds

Push and Pull for Pleated Blinds

These blinds are now suitable for a child's bedroom as the cords are attached to the window sill and the blind is raised and lowered with a handle. The blind can be stopped in any position.

Vertical Blinds

A wand is fitted eliminating the need for cord and chain. The wand can be used to open and close the slats and pull the slat across the head rail.

To change the amount of light entering a room, rotate the wand to the desired position.

Roller Blinds

There are a few options for making the blind compliant with the regulations. The blind can be fitted with a P clip or breakaway connectors.

In addition, a spring loaded blind if the window is not too wide can be used.

P Clip

The P Clip is screwed to the wall with a screw. The clip must be fitted taut.

Breakaway Connector

Designed to breakaway if too much pressure is applied.

Venetian Blinds / Wooden Blinds

The connector comes apart under too much pressure.

Cleat

The cleat is fitted high enough to be out of the reach of children.

The cords are wrapped around the cleat.

Motor Operated

Motorized Blinds

They can be battery operated or hard wired. They don't have any cords or chains.

Perfect Fit Blinds

Perfect Fit Blinds are designed to fit into UPVC windows and doors.

The blinds are fitted within an inner frame.

Intu Blinds

These blinds work in a similar way as the Perfect Fit Blinds.

With no free- hanging cords, these blinds are considered safe.
